No. $\frac{S.B.}{298}$ OF 1898.

From

THE SURGEON-GENERAL WITH THE
GOVERNMENT OF BOMBAY;

To

THE CHIEF SECRETARY TO GOVERNMENT,
General Department,
Bombay.

Office of the Surgeon-General with the Government of Bombay:
Bombay, 12th April 1898.

SIR,

I have the honour to forward, for the information of Government, the Annual Administration Report on the Lunatic Asylums of the Bombay Presidency for the year 1897.

2. The Public Works Department have carried out the usual repairs during the year under review.

3. *At Colába*, the cost of petty repairs to the buildings amounted to Rs. 3,819-7-6, and the cost of providing semi-permanent huts for the asylum servants, in lieu of those that were condemned as old and insanitary, was Rs. 1,940-10-9, making a total of Rs. 5,760-2-3 as compared with Rs. 2,811-1-5 in the previous year.

4. *At Ratnágiri*, all the asylum buildings are in good order, with the exception of the urinals in the sleeping barracks which are objectionable and detrimental to the health of the insanes. Plans and estimates for new urinals are being prepared by the Public Works Department, and will be submitted to Government for sanction on receipt. The works mentioned in paragraph 4 of of my last report have been completed.

5. No additions or alterations were made in the buildings of the Poona Lunatic Asylum during the year.

6. *At Dhárwár*, the openings in the wall of the male day-barrack, which looked on to the female yard, were blocked up, and two latrines of Government type for servants were constructed, the cost being met from the discretionary grant at my disposal. It is necessary that a wall should be constructed in place of the existing palings on the sides of the male and female yards facing the main and the jail roads, as the present arrangement is both insecure and objectionable, owing to the proximity of the roads in question.

7. *At Ahmedabad*, improvements in the ventilation, &c., to the main latrines in use in the asylum have been made, and three additional fixed presses provided in the store-room to complete the requirements. The cost of both these works was defrayed out of the discretionary grant at my disposal.

8. There has been no change in the buildings of the Sir Cowasji Jehángir Lunatic Asylum at Hyderabad. The necessity of raising the outer walls of the asylum and the inner enclosures is still urged by the Superintendent, as at present they are too low to prevent the escape of lunatics.

9. The water-supply was good and abundant. At Colába the auxiliary tank was almost always full and met the requirements of the institution. At Ratnágiri the supply for gardening purposes is not sufficient. The Poona

Asylum gets its supply of drinking water from four stand-pipes in different parts of the institution, and that for gardening purposes from the irrigation canal. At Dhárwár the well in the asylum garden compound supplies water for domestic purposes, whereas that for the garden has to be brought from a distance by means of a water cart. The Sir Cowasji Jehangir Lunatic Asylum at Hyderabad obtains its water from three of the wells in the compound. The fourth well is out of repair and without a Persian wheel, but this defect will be remedied as soon as funds are available.

10. The undermentioned works were executed at the lunatic asylums and paid for out of the Surgeon-General's discretionary grant during the year 1897 :—

	Rs.
Constructing two latrines of Government type for servants at the Lunatic Asylum at Dhárwár	244
Completing the presses for clothing in the store-room at the Lunatic Asylum, Ahmedabad	100
Improving the ventilation, &c., of the latrine, chiefly used by the lunatics, inside the Lunatic Asylum, Ahmedabad	130
Blocking up the openings in the northern wall of the male day-barrack at the Lunatic Asylum, Dhárwár	58
Total ...	532

11. On the statistical statements appended at the end of the Report, I beg to make the following remarks :—

Statement No. I shows that the total population of the asylums during the year under review was 1,029, showing an increase of 23 over the preceding year. Of these, 836 were males and 193 females, against 817 males and 189 females in 1896. On 1st January 1897 there remained 592 males and 144 females; 232 males and 48 females were admitted, and 12 males and 1 female re-admitted; 69 males and 12 females were discharged cured, 87 males and 10 females transferred to the care of friends (63 males and 4 females improved and 24 males and 6 females not improved), and 9 males discharged otherwise (3 escaped, 5 made over to friends by order of the Magistrate and 1 transferred from the criminal to the civil list on expiry of sentence). 61 males and 20 females died as compared with 59 males and 19 females in the previous year. At the close of the year 1897 there remained 610 males and 151 females—total 761 against 736 (males 592 and females 144) in 1896. The daily average strength was 616·4 males and 148·3 females—total 764·7, as compared with 723·4 (males 583·2 and females 140·2) in the preceding year.

The percentages of deaths and cures to the daily average strength were :—

Cured	...	Males	11·2	Total	...10·6
		Females	8·1		
Died	...	Males	9·9	Total	...10·6
		Females	13·5		

The percentages to admissions were :—

Cured	...	Males	28·3	Total	...27·6
		Females	24·5		
Died	...	Males	25·0	Total	...27·6
		Females	40·8		

Statement No. II gives details of criminal lunatics. At the beginning of the year there remained 96 males and 9 females, 35 males were admitted and 2 males re-admitted, making a total of 133 males and 9 females—a grand total of 142 in all confined, as compared with 130 (males 120 and females 10) in 1896. Of these, 12 males were discharged, transferred, &c., and 9 males died, leaving 112 males and 9 females on 31st December 1897. The daily average of these insanes was 113·7 (males 104·7 and females 9·0) against 101·2 (males 92·0 and females 9·2) in the previous year.

Particulars of the different kinds of this class of insanes is given in the following table :—

Criminal Lunatics.	Colába.	Ratnágiri.	Poona.	Dhárwár.	Ahmedabad.	Hyderabad (Sir Cowasji Jehángir).	Total.
Those tried and acquitted on the ground of insanity	9	7	...	1	5	5	27
Those insane on admission and found to be incapable of making a defence ...	29	16	4	8	12	15	84
Those who became insane during imprisonment	11	1	4	8	5	2	31
Total ...	49	24	8	17	22	22	142

Statement No. III shows the religion, sex and residence of the lunatics admitted during the year under review. The total number of Christians admitted was 64, of whom 44 were Europeans, 4 Eurasians and 16 Native Christians. Hindus numbered 138, Mahomedans 72 and other castes 19. Of the 44 European insanes, 36 were military men (from Bombay 18, Bengal 4, Madras 5 and the Punjab 9), 7 civilians (from Bombay 5, Bengal 1 and the Punjab 1), and one was a sailor from the Bombay Harbour.

Statement No. IV is a return showing the previous occupation of the patients admitted during the year. Cultivators and labourers furnished the largest number of admissions, *viz.* 50. Beggars and mendicants numbered 38, military soldiers 36, merchants and traders 23, domestic servants 16, artisans and clerks 11 each, and students 10. In 39 cases the occupation was not ascertained and 19 had no occupation.

Statement No. V treats of the ages of the insanes admitted according to sex. There were 25 insanes (20 males and 5 females) under the age of 20, 219 (186 males and 33 females) between 20 and 40, 45 (36 males and 9 females) between 40 and 60, and 4 (males and females 2 each) above 60 years of age.

Statement No. VI showing the various types of insanity is revised in accordance with the orders of the Government of India contained in their Home Department (Medical) No. 2 Medl.—49, dated 28th January 1897, embodied in the Bombay Government Resolution No. 1345, dated 11th March 1897, General Department. The following table shows the different types of insanity, with the result of the treatment of each form :—

	Remained.	Admitted.	Total.	Recovered.	Improved.	Died.
Idiocy	33	5	38	...	...	1
Mania, acute or chronic ...	391	112	503	43	12	46
Melancholia ,, ...	112	86	198	14	31	13
Dementia, including acquired ...	184	77	261	6	19	20
Mental stupor	...	2	2	...	...	...
General paralysis of the insane...	1	2	3	...	...	1
Delusional insanity... ...	3	4	7	1	5	...
Declared to have recovered or not yet diagnosed ...	12	5	17	17	...	...
Total ...	736	293	1,029	81	67	81

Statement No. VII gives the alleged causes of insanity among the lunatics. Of the 1,029 insanes confined in the asylums, a cause is given in 486 and is unknown in 543. Of the known causes, 379 are attributed to physical and 107 to moral causes. Of the former, the use of intoxicating drugs and abuse of spirits accounted for 150 cases, previous attacks 49, epilepsy 38, hereditary causes 33, fever 26, congenital disease 18, masturbation 15, injury to head and destitution 12 each, child-birth 7, sexual excess 6, syphilis 5, sun-stroke 4, climate 3 and uterine disorder 1.

The following are the causes, as far as they can be ascertained, leading to insanity in persons charged with crimes of violence :—

Gánja smoking ...	12	Grief	2
Spirit drinking... ...	1	Religion	1
Fever	2	Anger	1
Puerperal fever ...	1	Anxiety	2
Epilepsy	9	Previous attacks ...	2
Injury to head... ...	1	Masturbation	1
Hereditary	3		

No cause could be given in 47 cases.

Statement No. VIII is a return of sick insanes treated in the asylum hospitals for diseases other than insanity. On 1st January 1897 there remained 39 patients under treatment, and 522 were admitted, giving a total of 561 as compared with 551 in the previous year. Of these, 422 were cured, 19 discharged otherwise (17 made over to the care of their friends, 1 relieved and in 1 case the disease was changed), and 81 died, leaving 39 at the end of the year on the sick roll. The daily average sick was 49·0 (males 38·9 and females 10·1) against 47·2 (males 34·7 and females 12·5) in 1896. Malarial fevers, dysentery, debility, diarrhœa, bronchitis and chronic phthisis were the chief causes of admissions. Malarial fevers of intermittent type were rife mostly during the monsoon and a few cases during the cold season. Quinine, cinchona alkaloids and cinchonidinæ sulphas are freely used during these seasons, and quinine and ferruginous preparations usually given with advantage to those who are debilitated and anæmic. Of the 81 deaths, dysentery is credited with 22, phthisis chronic 12, Bright's disease 7, anæmia, paralysis and debility 5 each, old age, diarrhœa and albuminuria 4 each, epilepsy 3, choleraic diarrhœa and fatty degeneration of heart 2 each, and erysipelas, scurvy, apoplexy, pneumonia, dropsy and splenitis 1 each.

The following table gives the ratio of deaths per mille of the average daily strength and the total population of each of the asylums as compared with that of the previous year :—

		Average Daily Strength.	Total Population.	Number of deaths.	Ratio of deaths per mille to	
					Average Daily Strength.	Total Population.
Colába	1897 ...	285·1	441	48	168·4	108·8
	1896 ...	274·8	432	51	185·6	118·1
Ratnágiri	1897 ...	98·7	110	5	50·7	45·5
	1896 ...	94·9	111	4	42·1	36·0
Poona	1897 ...	99·8	141	12	120·2	85·1
	1896 ...	94·0	145	9	95·7	62·1
Dhárwár	1897 ...	61·8	70	6	97·1	85·7
	1896 ...	49·4	56	4	81·0	71·4
Ahmedabad	1897 ...	109·3	120	2	18·3	16·7
	1896 ...	103·8	117	5	48·2	42·7
Hyderabad (Sir Cowasji Jehángir).	1897 ...	110·0	147	8	72·7	54·4
	1896 ...	106·5	145	5	46·9	34·5
Total ...	1897 ...	764·7	1,029	81	105·9	78·7
	1896 ...	723·4	1,006	78	107·8	77·5

From the above table it will be seen that, excepting at Colába and Ahmedabad, the death-rate was higher in all the asylums during the year under report. At Colába there were 48 deaths (4 Europeans and 44 natives) as compared with 51 (3 Europeans and 48 natives) in 1896, giving a ratio of 108·8 deaths per mille of the total population against 118·1 in the previous year. The mortality among the Europeans was at the rate of 58·8 per mille of the total population as compared with 41·1 in 1896, and was due to dysentery 2, fatty degeneration of heart 1 and chronic phthisis 1. The two cases of dysentery and one of chronic phthisis were long under confinement in this institution suffering from chronic dementia, and their health being much impaired by the incarceration for 14 years, they succumbed to the prevailing diseases. The case of fatty degeneration of heart occurred in a British soldier who had been suffering from melancholia. The man was ailing from anæmia and extreme debility some time prior to his confinement in the asylum and died in 10 days, in a state of syncope, after admission. Among the natives there was a death-rate of 118·0 per mille of the total population against 133·7 in the preceding year. The principal causes were dysentery, chronic phthisis and Bright's disease. Seven of these cases were brought in by the Police and were found on admission to be suffering from an advanced stage of the disease, chiefly from chronic phthisis and dysentery. The others were more or less old residents of the asylum who had been suffering from anæmia and debility for some time, and all such cases succumbed inevitably to the prevailing diseases.

At Ratnágiri the number of deaths was 5 against 4 in 1896, and the ratio per mille of the total population was 45·5 as compared with 36·0 of the previous year. The causes of deaths were diarrhœa 3 and dysentery and anæmia 1 each. The case of anæmia was a male whose bodily condition on admission into the asylum on 20th December 1894 was shown as "indifferent." He was anæmic and of dirty habits. He was admitted into the hospital for anæmia on 4th July 1896. Tonics, stimulants, liberal diets, &c., were given, but his condition, physical and mental, continued the same, and he succumbed to chronic diarrhœa on 15th May 1897. The male who died of acute dysentery was of dirty habits and unmanageable since his admission into the asylum on 17th January 1896. He suffered from the disease, and was admitted into hospital on 14th November 1897. He refused nourishment, and medicine had to be forcibly given. He died on the 19th idem. The three cases of diarrhœa were all females, whose health on admission into the asylum was poor or indifferent. One of them was subject to frequent epileptic fits, and very dirty in her habits. She constantly suffered from fever. On 3rd July 1897 diarrhœa set in. She refused food and medicine, and resisted all treatment, and died on 21st July 1897. The other was turbulent, indecent and dirty in her habits. She was admitted into the Asylum Hospital for diarrhœa on 23rd July 1897, and died on the 5th of the following month. The third was dirty and had delusions. She became emaciated, and was admitted into the hospital for diarrhœa on 3rd October 1897, and died on the 8th of the same month.

At Poona there were 12 deaths, or 3 more than in the previous year. The ratio of deaths per mille of the total population was 85·1 as compared with 62·1 in 1896. The mortality was due to albuminuria 4, general paralysis and anæmia 2 each, and debility, apoplexy, chronic diarrhœa and chronic splenitis 1 each. The case of anæmia with general debility was admitted into the asylum from the Yerrowda Central Prison on 16th November 1896, and at once transferred to the sick list, being in a very weak and emaciated condition, and unable to walk or stand. He continued in this state from the date of admission, and gradually died from exhaustion on 18th May 1897. The *post-mortem* examination showed that the membranes of his brain were somewhat thickened and injected. The cavity of the arachnoid contained about 2 ounces of thickish fluid of a reddish colour. There were some deposits of granular lymph on each side of the longitudinal fissure. The brain presented a pale and anæmic appearance. There was no fluid in the ventricles. The choroid plexuses were very anæmic. No abnormal growth of any sort was found in the brain. The other organs of the body were found to be very anæmic. The brain weighed 39 ounces. The female, who died of anæmia associated with chronic dysentery was admitted into the asylum

on 22nd December 1892 in a weak and emaciated condition, and remained in a nervous and debilitated state until finally transferred to the sick list on 14th December 1896 for dysentery. She never rallied from the attack and died on 9th February 1897. No *post-mortem* examination was made, as her relations claimed the body. The fatal case of paralysis was sent to the asylum by the First Class Magistrate, Sholápur, on 6th September 1896. On admission he was suffering from general paralysis and unable to walk. On 1st January 1897 he was suddenly seized with a severe attack of involuntary muscular movements which rendered him completely unable to assist himself. From this date incontinence of urine became established, and continued until his death on 3rd February 1897. At the request of his relations no *post-mortem* examination was performed. The patient suffering from chronic splenitis was admitted into the asylum, by order of the First Class Magistrate of Sholápur on 16th April 1884, for chronic mania. He was then suffering from an enlarged spleen and liable to recurrent attacks of malarial fever. During residence in the asylum he had periodic attacks of great excitement which were for the most part accompanied by fever. On 17th January 1897 he was finally transferred to the sick list, and continued under treatment until his death, which took place on 17th November 1897. The *post-mortem* examination showed that the brain was anæmic and soft. There was no fluid in the ventricles. No abnormal growth of any sort could be seen. The membranes rather pale. The spleen was enlarged and weighed 15 ounces. Liver dark and soft. Heart rather pale and fatty. The case of diarrhœa was admitted into the asylum in a weak and emaciated condition on 7th February 1897. She was subject to recurrent attacks of diarrhœa and inability to assimilate the ordinary asylum food, which rendered it necessary to place her on special diet from first arrival. No improvement took place in her general condition and she died on 4th April 1897. The *post-mortem* examination showed that there were about 2 ounces of thin serous fluid in the cavity of the arachnoid. The longitudinal sinus contained a large clot of blood. The membranes of the brain were thinned and anæmic. Some of the vessels in the brain contained dark coagula of blood, others were empty. The brain substance had a general anæmic appearance. No sign of hœmorrhage of any part of the brain could be discovered. The ventricles of the brain did not contain any fluid. The choroid plexes was anæmic. The lungs and heart were rather pale, otherwise normal. The liver was pale and fatty. The spleen weighed 4 ounces. The stomach and intestines were pale and anæmic with no ulceration or inflamed spots. The uterus was empty. The case who died of albuminuria was admitted into the asylum on 22nd February 1896 for dementia. Though not of a robust constitution, he never suffered from any complaint until 1st May 1897, when symptoms of albuminuria appeared, necessitating his permanent transfer to the sick list. From this date the albumen increased, and he died in a very weak and exhausted condition on 4th August 1897. The *post-mortem* examination showed that the brain was congested, the veins containing an abnormally large quantity of dark blood. There was a large quantity of thin serous fluid in the cavity of the arachnoid and in the ventricles of the brain. The brain substance was somewhat abnormally soft; no morbid growth of any sort detected. The brain weighed 3 lbs. Left kidney pale and fatty, weighing 5 ounces, right kidney 4 ounces. Both the lungs somewhat consolidated at the apices. Heart undergoing fatty degeneration and weighing about 5 ounces. The second fatal case of albuminuria was sent into the asylum by order of Government on 20th January 1897 in a weak and debilitated condition and suffering from general paralysis of the insane. On 15th May he was brought on the sick list for albuminuria, and continued under treatment for this disease until death on 5th October 1897. No *post-mortem* examination was made, as the body was claimed by his son. The second case of paralysis was admitted into the asylum on 18th February 1897 from Ahmednagar in a weak and debilitated state. He was suffering from incontinence of urine, involuntary muscular movements and inability to walk. The symptoms gradually increased, and he was permanently transferred to the sick list on 1st June 1897, where he continued until death on 2nd July 1897. The *post-mortem* examination showed that the brain weighed 49 ounces. The membranes and the surface of the brain were highly congested. There was some effusion of sanguineous fluid on the lower surface of the brain. There was no effusion of any sort in the

ventricles; no abnormal growth of any kind could be seen. Other organs normal. The patient who died of debility was admitted into the asylum on 15th August 1896 for dementia by order of the First Class Magistrate, Dhulia. He was then in an impaired state of health and in a weak and excitable condition and difficult to manage. He soon became liable to recurrent attacks of fever which necessitated his being placed on the sick list on 10th June 1897. He gradually sank and died on 24th September 1897. The *post-mortem* examination showed that the surface and membranes of the brain were congested and soft with a little serous fluid in the ventricles and cavity of the arachnoid. No morbid growth of any sort was detected; the brain weighed 2 lbs. and 6 ounces. The fatal case of apoplexy was admitted on 18th January 1880 for chronic mania associated with insomnia. On admission he was fairly robust, but liable to frequent and violent outbursts of passion, and very dirty in habits. During his long residence in the asylum he was not placed on sick list until 19th June 1897, when he was suddenly attacked with hemiplegia of the left side from which he never recovered, and died on the fifth day after the attack. The *post-mortem* examination declared as follows:—"Brain congested, the veins containing an abnormal quantity of dark venous fluid. There were a large number of dark clots in the superior longitudinal sinus, some serous fluid in the cavity of the arachnoid and also in the ventricles. No abnormal growth. Brain weighed 40 ounces." The third case of albuminuria was in an indifferent state of health, when admitted into the asylum on 18th November 1896, due to albuminuria associated with chronic diarrhœa. For the next six months he gradually improved in health, but towards the beginning of June 1897 albumen increased, necessitating his permanent transfer to the sick list on 20th idem. From this time he gradually got weaker and more emaciated and died on 12th August 1897. The *post-mortem* examination showed as follows:—"There was nothing remarkable in the membranes of the brain. The brain was rather anæmic and soft with some clear serous fluid in the ventricles. The choroid plexuses were anæmic. The brain weighed 2 lbs and 6 ounces, and there was no abnormal growth. The heart somewhat fatty. Lungs normal. Both kidneys fatty." The fourth case was, on admission into the asylum on 26th February 1891, returned as in good health and remained comparatively well until 10th July 1897, when symptoms of albuminuria gradually supervened and necessitated his being placed on the sick list. From this time his health became steadily impaired and the quantity of albumen increased. On the night of 16th October 1897 he suddenly became delirious and shortly afterwards passed into a comatose condition which lasted until death at 4 A. M. next morning. The *post-mortem* examination showed that the brain weighed 48 ounces; membranes were anæmic; no fluid in the cavity of the arachnoid. The vessels on surface of brain shrunken; substance of brain very anæmic and the cut surface had a white appearance. No fluid in the ventricles, nor abnormal growth of any sort detected. The heart and other organs presented a very pale appearance.

The Dhárwár Asylum shows an increase of 2 deaths over the previous year, *viz.* 6 against 4, giving a ratio of 85·7 per mille of the total population as compared with 71·4 in 1896. The casualty in two cases resulted from choleraic diarrhœa and in 1 each from pneumonia, epilepsy, scurvy following starvation and general debility. The 2 choleraic diarrhœa cases were probably due to outside causes—one died two days after attack from exhaustion and the other (an old man) owing to failure of heart's action. The fatal case of scurvy had been refusing his food at times since November 1896 and had to be fed artificially; he became gradually emaciated and at last succumbed in January 1897 from exhaustion. The patient who died of pneumonia was first admitted with symptoms of bronchitis, subsequently developing pneumonia. The case of death from epilepsy was that of a blind and debilitated old man. He died from suffocation caused by a morsel of food during an attack of epilepsy whilst taking his food. The fatal case of general debility was that of an insane who was suffering for a long time from gradual weakness. General dropsy supervened and he died after nearly a year's illness.

At Ahmedabad the number of deaths was 2, or 3 less than in 1896. The ratio of deaths per mille of the total population was 16·7 as compared with 42·7 of the preceding year. Of the two deaths, one was that of a female insane who

was an inmate of the asylum for nearly 12 years. She was admitted for dysentery, and having refused all nourishment, gradually wasted away. The other was also of a female inmate of over five years' residence in the asylum. She suffered for a long time from maniacal excitement, took little nourishment and became very anæmic. She remained on the sick list for nearly a month and a half and died of exhaustion.

The Sir Cowasji Jehángir Lunatic Asylum, Hyderabad, returned 8 deaths against 5 in the previous year. The ratio of deaths per mille of the total population was 54·4 as compared with 34·5 in 1896. The causes were debility 3 and dysentery, erysipelas, anæmia, epilepsy and hemiplegia 1 each. Of the 8 patients who died, 3 were very old men aged each about 70 years. Several cases were admitted in a wretched condition of health and never rallied after their admission. The death-rate during the year under report, though larger than that of the previous year, is an improvement on the past years. Taking the past three years, and comparing them with the previous three years, a marked improvement is noticed. Great care is taken that the patients are not allowed to leave their barracks in the cold weather before the sun is well up, mattresses have been substituted for the raised sleeping places, and the long fast from the previous day's dinner to the next day's breakfast has been abolished by giving a small meal early in the morning. All these measures have tended to improve the general health and guard against illness. No cases of pneumonia occurred during the year under report. In spite of an unhealthy season with a heavy rainfall and high inundations, malarial fevers have not been prevalent to any great extent.

There were no cases of injuries of a "major" kind treated in the asylums during the year under review, excepting that at Poona and Ahmedabad there were two cases of simple fracture—one of the humerus and other of the right arm in epileptic insanes caused in each case by a fall.

Statement No. IX is the cash account of the asylums during the year under review. The total income was Rs. 1,57,616-7-5. Of this, Rs. 1,29,691-9-6 were received from the Treasury, Rs. 14,510-3-2 from paying patients, Rs. 2,710-11-11 from the Manufacturing Department, being the value at market rates, less cost of raw materials, of articles supplied to the asylums and sold to the public, and labour of insanes employed on trees, and Rs. 10,640-4-7 were "book receipts" on account of work done by the Public Works Department and supply of forms, stationery and Europe medicines, &c. The corresponding figures for the previous year were Rs. 1,18,437-15-10, Rs. 14,142-12-1, Rs. 2,697-14-6 and Rs. 17,226-14-3. The sum of Rs. 63-10-3 was realized by the sale of unserviceable articles as compared with Rs. 41-5-6 in 1896.

The total expenditure amounted to Rs. 1,57,616-7-5 against Rs. 1,52,550-10-2 in 1896. The cost on establishment was Rs. 52,813-5-11 as compared with Rs. 53,273-0-3 in the previous year. Rs. 61,085-3-8 were expended on diets against Rs. 50,983-6-11 in 1896; the increase under this head is attributable to the comparatively higher contract rates prevailing during the year and the increased number of patients. Clothing and bedding cost Rs. 6,092-9-9, the increase of Rs. 711-11-9 over the preceding year being due to the purchase of a larger amount of new clothing and bedding at higher contract rates for new admissions as well as for replacing those old and worn out ones at Colába, Ratnágiri and Dhárwár. The expenditure on medicines amounted to Rs. 2,273-9-0 as compared with Rs. 2,141-1-7 in 1896. There is an increase of Rs. 733-9-11 in the cost of contingencies over the previous year, being due to the higher contract rates of articles prevailing during the year at all places, as well as to the higher water-rates being charged from the beginning of the official year based on the actual consumption of the preceding three years at the Colába Lunatic Asylum.

If the amounts of Rs. 14,510-3-2 received from paying patients, Rs. 1,336-5-5 on account of the sale of manufactured goods to the public and labour on trees, Rs. 63-10-3 realized by the sale of unserviceable articles and Rs. 1,374-6-6 made over to asylums for asylum purposes,—total Rs. 17,284-9-4,—be deducted from the amounts received from the Treasury and adjusted to Government as

"book receipts," the net cost to Government will be Rs. 1,23,047-4-9 and the net cost per head of daily average strength Rs. 160-14-7 as compared with Rs. 1,18,779-2-0 and Rs. 164-3-2 respectively in 1896.

The abstract of cash account required by the Government of India is given below :—

With reference to paragraph 7 of Government Resolution No. 2714, dated 2nd July 1894, General Department, I beg to state, for the information of Government, that I have nothing more to add than what has been stated in my Annual Report on the Asylums of the Bombay Presidency for the year 1895, *re* the fluctuations in expenditure under various heads in the different asylums, as the remarks therein made equally apply for the year under report.

Statement No. X shows the sanctioned establishment as it stood on 31st December 1897. The monthly cost was Rs. 3,993-8-0 against Rs. 4,145-8-0 in the previous year.

Statement No. XI gives receipts and expenditure of the Manufacturing Department. The total credits amounted to Rs. 3,715-15-5 and debits to Rs. 2,297-4-5, giving a profit of Rs. 1,418-11-0 against Rs. 1,223-12-1 in 1896. The average number of insanes employed during the year was 300·7 males and 66·2 females—total 366·9, as compared with 351·0 (males 288·9 and females 62·1) in the previous year. In calculating the percentage of lunatics employed, those employed as supplementary servants of the asylums have also been included in this statement, but the estimated value of their labour has not been taken into account.

Statement No. XII gives the condition of the lunatics as to caste, sex and marriage, and is summarized in the following tables :—

Table I.

		Total Number.									Percentage of

Statement No. **XIII** shows particulars regarding criminal insanes. The nature of the crimes were theft 31, culpable homicide amounting to murder 45, culpable homicide not amounting to murder 13, attempting suicide 2, voluntarily causing grievous hurt 17, house-breaking 8, mischief and assault 7 and miscellaneous offences 19.

12. The official visitors were regular in their attendance at all the asylums.

13. Owing to his heavy office duties consequent on the Plague and to his transfer to Bombay as Surgeon-General in the end of October, the Sir Cowasji Jehángir Lunatic Asylum at Hyderabad was not inspected by the Principal Medical Officer, Sind District. On the 20th November 1897 I inspected the Poona Lunatic Asylum and found its management to be efficient. The premises are kept in good order, but I consider that the buildings are ill-arranged and in several respects defective. The latrines are faulty in construction and in bad repair, and I disapprove of the earthen floors, which should be of some impermeable material.

14. The death of my predecessor, together with greatly increased work in my own office and as a member of the Bombay Plague Committee in connection with the Plague epidemic, prevented inspection of any of the other lunatic asylums in the Presidency.

15. So far as I have been able to judge, all the Superintendents of Asylums have worked with zeal and efficiency.

I have the honour to be,
Sir,
Your most obedient Servant,

G. BAINBRIDGE, M. D.,
Surgeon-Major-General,
Surgeon-General with the Government of Bombay.

ANNUAL STATEMENT No. I.

Showing separately the Admissions, Discharges, &c., &c., of Lunatics in the Lunatic Asylums in the Bombay Presidency during the year 1897 and ten previous years.
